Eco Mark Product Category No. 112

“Stationery/Office Supplies Version 2.2”
Certification Criteria

—Applicable Scope—

Stationery/office supplies listed in Attachment 1. Out of drawing paper, etc., products sold in the form of base paper or half-finished products are included in Eco Mark Product Category No. 107 “Printing Paper Version 3”, etc. For packaging paper, packaging bags, and envelopes, finished paper products are included in this Product Category, and base paper products are classified in Product Category No. 113 “Packaging Paper Version 3”. This Product Category shall not cover products using polymers containing halogens (including surface coating) and products for electrical commodities.

Established: June 1, 2015
Last revised: March 1, 2018
Expiration: May 31, 2022

Japan Environment Association
Eco Mark Office

NOTE: This document is a translation of the criteria written in Japanese. In the event of dispute, the original document should be taken as authoritative.
Eco Mark Product Category No.112  
“Stationery/Office Supplies Version 2.2”  
Certification Criteria

Japan Environment Association  
Eco Mark Office

1. Purpose of Establishing Certification Criteria  
Omitted.

2. Applicable Scope  
Stationery/office supplies listed in Attachment 1.  
Out of drawing paper, etc., products sold in the form of base paper or half-finished products are included in Eco Mark Product Category No. 107 “Printing Paper Version 3”, etc. For packaging paper, packaging bags, and envelopes, finished paper products are included in this Product Category, and base paper products are classified in Product Category No. 113 “Packaging Paper Version 3”.  
This Product Category shall not cover products using polymers containing halogens (including surface coating) and products for electrical commodities.

3. Terminology  
Omitted.

4. Certification Criteria and Certification Procedure  
4-1. Environmental Criteria and Certification Procedure  
4-1-1 Resource saving and resource recycling  
(1) Main materials shall meet a base percentage of recycled materials defined in the Attachment 1. Recycled materials refer to waste paper pulp, reused/unused wood, recycled plastic, and other recycled materials (wasted egg shells/seashells/gypsum plaster boards and products discarded after being used as a product).  
Note that the cassette for tape printer, etc. may meet the criteria item (2) instead of this item (1), and the fountain pen may meet the criteria item (3) instead of this item (1).  
Of the media case, OA filter (framed), OHP film, and clear folder (file), products using plant-based plastic shall meet the criteria item (4) instead of this item (1). For the envelopes with window (paper product) that uses plant-based plastic in the window section, not only the envelopes shall meet this item (1), but also the window section shall meet the criteria item (4).  
The dust blower shall meet the criteria item (10) instead of this item (1).  
Any products that use forest-certified wood shall meet the criteria item (27) instead of this item (1).
[Certification Procedure]

<For waste paper pulp>
Certificates of a percentage (mass percentage) of waste paper in the pulp mixture and manufacturing process/management certificates indicating the name of manufacturers in each manufacturing process shall be submitted. A paper quality certificate issued by a paper manufacturer and indicating a percentage of waste paper pulp (a specific numeric value to be guaranteed at minimum) including the following items shall be submitted.

1) Thorough management at a manufacturing plant (by specifying the percentage of waste paper pulp of Eco Mark products in a written technical standard (quality standard), etc.), conducting internal audit on “Checklist for Verification System of Percentage of Waste Paper Pulp” (April 2, 2008, Japan Paper Association) or according thereto the percentage of waste paper pulp by a paper manufacturer.

2) Clear indication of names of those who are in charge of manufacturing or quality control of Eco Mark products at a manufacturing plant. However, if Eco Mark certified paper is used, statement of “Product Brand Name” and “Certification No.” of the paper in an attached certificate may replace the certificate.

<For reused/unused wood>
Certificates of a percentage (mass percentage) of reused/unused wood and a manufacturing process/management certificates indicating the name of manufacturers in each manufacturing process shall be submitted. A certificate issued by a raw material vendor, certifying that the raw material is reused/unused wood shall also be submitted.

If using thinned wood as the material, a certificate of origin that includes information on the place of production, type of tree, and year of planting shall be submitted with photographs of the forest concerned (showing clearly that the forest stand has been thinned). The thinning percentage and how many times the forest stand has been thinned, including the most recent thinning shall also be indicated if possible.

If using less useful wood, the following information shall be submitted. At the same time, official documents stating that the forest has been certified as sustainable by a third party shall be submitted.
- Type of forest (natural or man-made, etc.), place of production, type of tree, and year of tree planting if man-made forest.
- Under what conditions was the wood produced (damaged by disease/pests, damaged by disaster, bent or narrow trees, etc.). For small diameter log, indicate logging method and tip end diameter.

If using bamboo for the raw material, a description that felling was carried out for appropriate maintenance and management in environment preservation shall be provided.

For products using the products certified under No.111 “Board Made of Wood or the Like Version2”, the corresponding product name and certification number can be indicated in the application form instead of submitting the above certification of compliance to the corresponding criteria.

In the calculation of weight percentage, the weight percentage of the product or each material at the air dried state*1 or at the point of constant weight*2 under the condition of a temperature of 20±2°C and humidity of 65±5%.

*1: Indicates leaving in a well-ventilated room for seven days or more.
*2: Change is less than 0.1% when weight is measured every 24 hours.
*1 is not applicable in the case of using lumber and log. However, it is applicable
in the case of using wood which is equivalent to the criteria of percentage of water content (15% and below), among the international official criteria of percentage of water content for dried wood.

**<For recycled plastic>**
Certificates of mass percentage of recycled plastic and manufacturing process /management certificates indicating the name of manufacturers in each manufacturing process shall be submitted. In addition, raw material certificates issued by the recycled material collector shall be submitted.

**<For other recycled materials>**
Certificates of mass percentage of recycled material and manufacturing process /management certificates indicating the name of manufacturers in each manufacturing process shall be submitted. In addition, raw material certificates issued by the recycled material collector of wasted egg shells/seashells/gypsum plaster boards and products discarded after being used as a product shall be submitted.

(2) For the “cassette for tape printer, etc.” which is not applicable for the criteria item (1), it shall meet the following all requirements a) to d).

a) The followings shall be indicated on packaging, printed matters packed with the products, or instruction manuals: the product is a printing cassette used for the tape printer, etc. and the tape portion (including ribbon) of the used “cassette for tape printer” can be refilled and the expendable portions can be replaced as needed.

b) The product shall be able to use repeatedly at least five times in normal condition.

c) For the product which would be refilled in the factory, the collection system of the used “cassette for tape printer, etc.” shall be established.

d) For the product which would be refilled in the factory, the recycling ratio of the parts of the collected “cassette for tape printer, etc.” shall be 95% and over to the whole product mass (excluding ink). (Recycling ratio refers to the percentage of the part mass which were reused, material-recycled, for which energy recovery was done, for which oilification, gasification, blast-furnace reduction or chemical materialization for coke oven were done. For the portions of “cassette for tape printer, etc.” which are not to be able to reuse or recycle, proper treatment system shall be established. Any parts of collected “cassettes for tape printer, etc.” that cannot be reused or recycled shall undergo weight reduction, and then be appropriately disposed of, and shall not be simply buried.

**[Certification Procedure]**

a) Instruction manuals, product labels or pamphlets indicating that expendable portions can be refilled or replaced shall be submitted.

b) A documents to explain the fact that the product has already achieved at least five times repeated usage in normal condition or it can be used repeatedly at least five times shall be submitted.

c) A certification to indicate the collection system of “cassette for tape printer, etc.” shall be submitted.

d) Recycling ratio, content and method of processing/disposal of parts that cannot be recycled shall be explained.
(3) If the fountain pen does not fall under the criteria item (1), recycled materials shall be mixed in 50% or higher in the main material, and refilling of ink directly into the product body rather than by a cartridge shall be possible. In addition, even if production of said product is stopped, repairing by the manufacturer shall be available for at least subsequent ten years.

[Certification Procedure]
To certify the recycled material, documents similar to the Certification Criteria 4-1-1(1) shall be submitted. In addition, an instruction manual, etc. stating that refilling of ink directly into the product body rather than by a cartridge shall be possible and that even if production of said product is stopped, repairing by the manufacturer shall be available for at least subsequent ten years shall be submitted.

(4) The media case, OA filter (with a frame), OHP film, clear folder (file), and envelope with a window (paper product) that uses plant-based plastic in the window section shall meet all requirements in the following a) to c):

a) The content of biobased synthetic polymer in the product shall be equal to or higher than 25%;

b) The Applicant shall have the understanding of the supply chain from cultivation of plant materials to manufacturing of plant-based plastic (raw resin). Each process shall conform to the checklist in the Attachment 2; and

c) The Applicant shall have confirmed by the life cycle assessment (LCA) that for the plant-based plastic (raw resin), greenhouse gas emissions (CO2 conversion) from raw material procurement to discarding/recycling does not increase, when compared with conventional resin that is to be replaced. Note that if any increase in the emissions is offset by the reliable carbon offset (such as purchasing clean electric power, etc.), the applied product shall also conform to this item.

[Certification Procedure]

a) Certificates indicating the calculated content of biobased synthetic polymers in the product shall be submitted. For the plant-based plastic (raw resin) thereof, measurement results of the biobased synthetic polymer content calculated with the method specified in ISO 16620-3, using measurement results of the biobased carbon content and element composition by the 14C method specified in ISO 16620-2 or ASTM D6866 shall be mentioned. Should there be any deviation of 10% or higher between the measurement results and the content of biobased synthetic polymer in the standard, a description of a reason(s) therefor shall also be included. The measurement results of the biobased carbon content shall be submitted as an attached document.

In addition, for appropriate maintenance of the content of biobased synthetic polymer after certification, any of the following certificates issued by a raw resin supplier (including a dealer) shall be submitted.

· An explanatory document stating that measurements of the content of biobased carbon will be regularly carried out, and that measurement results can be disclosed as per a request of the Eco Mark Office; and

· A certificate that the Applicant has been audited or certified by a third party for management of the content of the biobased synthetic polymer.

b) Certificates issued by a raw resin supplier (including a dealer) indicating the supply chain (flow diagram, etc. and including purification, fermentation, etc.) from
the cultivation area (country, state, city, etc.) to manufacturing of plant-based plastic (raw resin), and status of conformance to the Attachment 2 shall be submitted.

c) Results of the LCA assessment of the plant-based plastic (raw resin) shall be submitted (reference to the existing paper, etc. is acceptable). If carbon offset is adopted, data describing content of the carbon offset and reliability shall be submitted together.

(5) The ballpoint pen, ink pad, vermilion, seal set, and OA cleaner (wet type and liquid type) shall have a replacement/refill of expendable portions. For the ballpoint pen, ink pad, vermilion, seal set, OA cleaner (wet type and liquid type), and any other products having a replacement/refill for the expendable portions shall indicate in their products or packages, instruction manuals, pamphlets, etc. that they are replaceable/refillable. (This item does not cover the products which are generally recognized as being refillable, such as lead of automatic pencil.)

[Certification Procedure]
Instruction manuals, product labels or pamphlets indicating that expendable portions can be refilled or replaced shall be submitted.

(6) Products shall be able to be sorted by part material (paper, wood, plastic, metal, glass, etc.) after use. However, in consideration of safety, any part required to be not easily sortable shall be excluded.

[Certification Procedure]
Product specifications indicating the method for sorting different materials used shall be submitted. If the applying product is a notebook, product sample shall be submitted. If there is any part required to be not easily sortable in consideration of safety, a description thereof shall be provided.
If recycled plastic film or plant-based plastic is used for a window part of envelope, specifications indicating the envelope body that “the envelope is such structured that recycled plastic film or plant-based plastic of X% used in the window part can be sorted” and a product sample shall be submitted. If glassine paper is used for the window part of envelope, specifications indicating on the envelope body that “glassine paper is used in the window part and can be recycled as waste paper” and a product sample shall be submitted.

(7) The product whose main material is paper shall contain no prohibited materials. However, this item shall not apply to a processed cover item intended for long-term storage, and a released paper.

[Certification Procedure]
Specific details shall be described in the Attached Certificate. In addition, if the file intended for long-term storage is subjected to processing of the front cover, results of a durability test on the assumption of ten-year storage shall be submitted.

(8) Products whose main material is plastic shall be labeled the type of plastic on the product body to facilitate recycling. The indication of plastic type shall use symbols in JIS K6899 or ISO 1043-1. The plastic type of the part at least having the highest mass percentage shall be indicated. Note that only products which have already
been certified may carry the same old plastic type indication. Basically, the above labeling method shall be followed, but for products requiring labeling of materials by other laws and regulations, the designated labeling method may be used. This item shall not apply to a binding tool, expendable portions, etc. of a file having a small indication space.

[Certification Procedure] Photographs or design drawings showing the labeled portion of the product shall be submitted.

(9) For the adhesive portion, an adhesive shall dissolve in water and not inhibit the waste paper recycling. However, this item shall only apply to products whose base material is paper excluding a gummed paper tape.

[Certification Procedure] A certificate indicating that an all-deflaking type adhesive or soluble or water dispersible adhesive is used, which does not inhibit waste paper recycling shall be submitted.

4.1.2 Prevention of Global Warming
(10) For a dust blower (main body), the product does not use fluorocarbons (substances defined in Section 1, Article 2 of the Act on Rational Use and Proper Management of Fluorocarbons) and highly combustible materials (materials defined in Item 1, Article 2, Chapter I of Security Regulation for General High-Pressure Gas).

[Certification Procedure] Name of gas used in the product shall be indicated in the Attached Certificate and Safety Data Sheet (SDS) of the used material shall be submitted.

4.1.3 Restriction and Control of Hazardous Substances
<Common>
(11) In manufacturing the applied product, related environmental laws and regulations and pollution control agreement (hereinafter referred to as the “Environmental Laws, etc.”) must be followed with respect to air pollution, water contamination, noise, offensive odor, and emission of hazardous substances in the area where the plant performing the final manufacturing process is located. In addition, the state of compliance with the Environmental Laws, etc. for the past five years from the date of application (whether there is any violation) must be reported. If there is any violation, proper remedies and preventive measures shall have been already taken, and the related Environmental Laws, etc. must thereafter be followed appropriately.

[Certification Procedure] With respect to the compliance with the Environmental Laws, etc. in the area where the plant performing the final manufacturing process is located, a
[Certification Procedure]
Product packaging material and raw materials used shall be described specifically (Drawings and photographs can be used). It shall be indicated in attached certificate that plastic materials to be used in product and product packaging do not contain organic halogen compound including halogen as prescription constituents.

(13) The product shall not use antimicrobial agents as far as possible. In the case of use, the product shall be certified by the SIAA Mark of Society of Industrial technology for Antimicrobial Article, etc.

[Certification Procedure]
The Applicant shall indicate in the attached certificate whether or not antibacterial agents are used. In the case of using antibacterial agents, documents certifying SIAA Mark of Society of Industrial technology for Antimicrobial Articles, etc. shall be submitted.

(14) Printing ink used shall conform to the standards concerning the elution of heavy metals listed in the attachment 3.

[Certification Procedure]
The Applicant shall indicate in the attached certificate that the standard value of...
<Products made mainly of paper>

(15) As for coated paper used for graph paper, drafting paper and notebooks shall be 17g/m² or less per side, 30g/m² or less for both sides of the paper. Or, the criteria item (1) of Eco Mark product category No.107 “Printing paper Version3” shall be satisfied.

[Certification Procedure]
Certificates on the volume of coating issued by the paper manufacture shall be submitted. The certificates shall include the control standard value of coating for single- and dual-sided specifications.

(16) As for graph paper, drafting paper and notebooks using uncoated paper, the control standard value on brightness of the paper shall be 70% or less. However, up to the control standard value +3% shall be accepted as an allowable error in the control of manufacturing process.

[Certification Procedure]
A certificate of the paper brightness issued by the paper manufacturer shall be submitted. In addition, the Applicant shall indicate the control standard value according to ISO whiteness (diffuse blue reflectance factor) defined in JIS P8148 in the attached certificate.

(17) The paper used for the product shall meet all the following items a) to c).

a) No chlorine gas shall be used in the pulp bleaching process.

b) Azo dyes (dyes or pigments) to be used in paper coloring process which may produce one or more of the amines listed in Attachment 4 due to the reduction of one or more azo groups shall not be used. When used, any one of the amines listed in Attachment 4 shall not exceed 30 mg per 1kg of the product.

c) Addition of fluorescent whitening agents as prescription constituents shall be minimized.

[Certification Procedure]
a) Certificates issued by the paper manufacturer shall be submitted.

b) Certificates issued by the paper manufacturer on whether the specified substances are used shall be submitted. If used, submit one of the following documents 1)-3) issued by the paper manufacturer that not more than one of the amines listed in Attachment 4 have been detected to exceed 30 mg per 1 kg of the product:

1) A certificate certifying that the corresponding azo colorants are not added in amounts exceeding 30 mg per 1 kg of the product.

2) A certificate certifying that at not more than one of the amines listed in Attachment 4 have been detected to exceed 30 mg per 1 kg of the product in all feasible cases.
3) A certificate certifying that that not more than one of the amines listed in Attachment 4 have been detected to exceed 30 mg per 1 kg of the product according to the analysis method prescribed in the collection of public testing methods based on the German food and daily goods law Article 35.

c) Certificates issued by the paper manufacturer indicating whether fluorescent whitening agents are used shall be submitted. If used, the amount of the agent used shall be included in the certificates.

<Products made mainly of wood>

(18) Products should not use wood preserving agents (wood termicides, wood preservatives, wood pesticides, and wood fungicides) as prescription constituents. In addition, for products using lumber from dismantled buildings (wood and wooden material that become wastes in building dismantling work) as a raw material, wood from which lumber subjected to preservatives/termiticides/insecticides are differentiated and eliminated shall be used.

[Certification Procedure]
A list indicating whether the concerned substances are added shall be submitted. In addition, certificates (operation manuals, process flow, etc.) certifying that the wood using the concerned substances are differentiated/eliminated when using the lumber from dismantled buildings or that no lumber from dismantled buildings is used shall be submitted.

(19) Prescription constituents shall be reported for products that have decorations on them.

[Certification Procedure]
A list indicating prescription constituents shall be submitted.

(20) Paint used on the product shall conform to the standards concerning the elution of heavy metals listed in the attachment 3.

[Certification Procedure]
The Applicant shall indicate in the attached certificate that the standard value of heavy metals is met by the method conforming to ISO 8124·3:2010. However, if the Eco Mark certified paint is used, stating the product brand name and certification number of the paint used in the attached certificate may replace the certification.

(21) Adhesives and paint used in the product shall not contain toluene, xylene, ethylbenzene or styrene as prescription constituents. Or, no emissions of toluene, xylene, ethylbenzene and styrene shall be detected at product shipment. “No emissions detected” means less than the value measured by the JIS A 1901 “Determination of the emission of volatile organic compounds and formaldehydes for building products -- Small chamber method”

[Certification Procedure]
Whether toluene, xylene, ethylbenzene or styrene is added as prescription constituents shall be indicated in the attached certificates. If toluene, xylene, ethylbenzene or styrene is added as prescription constituents, results of tests
prescribed in JIS A 1901 shall be submitted for corresponding products or used wooden materials, adhesives, and paint. Tests are not required for materials and products not added with toluene, xylene, ethylbenzene or styrene as prescription constituents. A list indicating prescription constituents of the adhesives or paint shall be submitted.

(22) Regarding emissions of formaldehyde, adhesives or paint used in the product shall meet one of the following criteria a) to c).

a) Equivalent to F**** grade in accordance with the JIS or JAS standard.
b) The amount of formaldehyde emissions measured by JIS A 1460 “Building boards determination of formaldehyde emission -- Desicator method” shall be below 0.3 mg/l for mean value and below 0.4 mg/l for maximum value.
c) The emission rate of formaldehyde measured by JIS A 1901 “Determination of the emission of volatile organic compounds and formaldehydes for building products -- Small chamber method” shall be less than 5µg/(m²・h).

[Certification Procedure]
Whether adhesives or paint is used in the material or product shall be indicated in the Attached Certificate. If used, certify with one of the following procedures a) - c) accordingly.
If corresponding to a), submit documents certifying that the adhesive or paint has been approved for F**** grade in accordance with JIS or JAS or copies of these documents. If corresponding to “b” or “c”, submit test results conducted by a third-party testing body or the applicant certifying that the results of measurement by the method prescribed in JIS A 1460 or JIS A 1901 satisfies the specified value.

<Products made mainly of plastic>
(23) The product shall conform to the standards on heavy metals listed in the attachment 3.

[Certification Procedure]
A document describing a control method to meet the standard values of heavy metals shall be submitted.
In addition, test results implemented by a third party testing center, public institution or the Applicant company, indicating that the product meets the standard values of heavy metals shall be submitted. The test method shall conform to ISO 8124-3:2010. The Applicant shall indicate in the attached certificate that the product meets the standard values of heavy metals according to the method conforming to ISO 8124-3:2010.

<Expendable portions, adhesive portions, etc.>
(24) Chalk, white line for ground and expendable portions and adhesive portions listed in the attachment 3 shall conform to the standards concerning the elution of heavy metals listed in the attachment 3. In addition, if gypsum plaster boards are used in recycled materials, any products that are found to contain asbestos, arsenic, and cadmium shall be differentiated and eliminated.

[Certification Procedure]
For the corresponding materials, test results implemented by a third party testing
center, public institution, or the applicant that certifies the conformity of the standard values of heavy metals shall be submitted.

If tests corresponding to JIS requirements have been performed on these harmful substances, the quality standard certificate can be submitted in place of the previous documents. The test method shall be according to ISO8124-3:2010. If the product that is found to contain asbestos, arsenic, and cadmium is differentiated and eliminated, a specific method of differentiation and elimination shall be reported.

(25) For expendable portions listed in the attachment 1, Class 1 organic solvents prescribed in the organic solvent poisoning prevention regulations, “1972 Ministry of Labor Ordinance No. 36”, and other organic solvents (chlorobenzene, nitrobenzene, formaldehyde, N,N-dimethyl-formaldehyde, toluene, methanol, and ethyl acetate) shall not be added as prescription constituents. In addition, a gummed paper tape, adhesive tape (fabric adhesion), double-faced adhesive paper tape, and bookbinding tape shall use a non-solvent adhesive.

[Certification Procedure]
A list indicating prescription constituents of solvent used in the product and self-certificate indicating not to add the corresponding organic solvents as prescription constituents in the products issued by the plant manager of the manufacturing plant shall be submitted. For the gummed paper tape, adhesive tape (fabric adhesion), double-faced adhesive paper tape, and bookbinding tape a certificate issued by the plant manager of the manufacturing plant indicating that a non-solvent adhesive is used shall be submitted.

4.1.4 Conservation of Biodiversity
(26) In products using paper material and wood material, if wood other than virgin pulp or reused/unused wood is used as a raw material, raw wood used as the raw material shall have its legality verified in light of the laws and regulations concerning forests in the country where the raw wood was logged and produced.

[Certification Procedure]
A certificate shall be submitted to prove that the timber whose legality has been verified* in accordance with “Guideline for Verification on Legality and Sustainability of Wood and Wood Products” of Forestry Agency has been in custody to be separated by the applicant or the paper manufacturer and is supplied to the applied products. At the same time, the applicant or the paper manufacturer who issues the above certificate shall submit any of the following certificates:

1) Certificate that the applicant or the paper manufacturer has been assessed and authenticated by the CoC (Chain of Custody) Certification System;

2) Certificate of the authorized company (that guarantees the association member’s adequate way of supplying wood and wood products verified with legality, etc.);

and

3) Code of management practice which stipulates the way of custody to manage wood and wood products verified with legality (the method in the case that the timber verified with legality only is handled. The same applies to hereunder), retention of certificates for a predetermined period, etc.

In the event that Item 2) or 3) above is chosen and the certificate is submitted, the
applicant or the paper manufacturer who issues the above-mentioned certificates shall publicly announce through its Web site the code of management practice prescribed by the association concerned in the case of Item 2) and shall prescribe and publicly announce through its Web site the code of management practice concerning the scheme to assess and guarantee the system for separative management, document management for retention of certificates for a predetermined period, etc. in the case of Item 3).

*Confirm the certificate issued by the related company closest in commercial process, which at least verifies that wood and wood products they supply are with legality and under separative custody management.

(27) For the product using any wood other than reused/unused wood, the mass percentage of forest-certified wood, which has been certified by a third party, in the total product mass (excluding any metal, expendable potions, or adhesive portions) shall be equal to or higher than 70%. Note that the mass percentage may be the certification method according to the credit method.

4.2. Quality Criteria and Certification Procedure

(28) The quality and safety of the product shall conform to the quality standard provisions of the Japan Industrial Standard etc.

<table>
<thead>
<tr>
<th>Certification Procedure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Test results based on quality criteria such as JIS (including size) or a document certifying that have acquired JIS-Mark certification shall be submitted. Alternatively, test results based on in-house criteria can be submitted (Presence or absence of JIS for the corresponding product is not considered). In addition, for “white line for ground”, a photograph of package bag, etc. indicating that the product is intended for use in ground shall be submitted.</td>
</tr>
</tbody>
</table>

5. Considerations

(1) The system for long-term use, such as part replacement or repair, shall be developed and information thereon shall be provided.

(2) The product package (one sales unit to the end consumer) shall give consideration to the resource saving and resource circulation and conform to the following items:
   a. The paper material shall have the percentage of waste paper in the pulp mixture of 70% or higher; and
   b. The plastic material shall have the mass percentage of recycled plastic of 50% or higher.

(3) The cutting mat shall be such designed that both faces can be used.

(4) The mechanical pencil shall be such designed that there is as little remaining lead
as possible.

(5) The marking pen, correction tape, glue (liquid), glue (starch paste), glue (solid), and glue (tape) shall have a replacement/refill for the expendable portions. In addition, these products or their packages, instruction manuals, pamphlets, etc. shall indicate that they are replaceable/refillable.

(6) The released paper shall contain no prohibited materials.

(7) For the gummed paper tape, an adhesive shall dissolve in water and not inhibit the waste paper recycling.

6. Product Classification, Indication and Others
Omitted.

June 1, 2015: Established: Version2
April 1, 2017: Revised (Terminology, Attachment 1, Version2.1)
March 1, 2018: Revised (15), (Version2.2)
May 31, 2022: Expiration date

The Certification Criteria for the Product Category will be revised when necessary.
Attachment 1 Applicable Stationery/Office Supplies

*1 For recycled plastics made from post-consumer materials, the base percentage of recycled material shall have 60% or higher of post-consumer materials
